

## Are you our new intern for the fall semester 2020?

Do you want to apply your theoretical knowledge on real world problems? Are you a strong candidate within your field of studies?

We are looking for interns to be part of our young, innovative and fast-growing company. If you are looking to be part of a team that has developed a ground-breaking technology with the potential to contribute to saving the planet, then you are the one we are looking for!

### Who we are

Lyras develops and manufactures Cold Pasteurization solutions, a greener and more cost-effective alternative to heat-based pasteurization. Our systems can achieve an energy reduction rate of more than 90% and allows for greater water efficiency. Moreover, the product shelf life is vastly longer with more vitamins and proteins retained, without compromising the products' natural taste and quality.

At Lyras, we value open communication and welcome and encourage new ideas or concepts. We have a lot of different internal and external organizational aspects that need exploring. During your internship with us, we would like to integrate you as part of the company so your daily input can be implemented quickly. It is important that you can work independently as well as in a team, but the opportunity for sparring with others will always be available.

### What we can offer

- A flat organizational structure, where we believe in freedom with responsibility, and we prioritize the opportunity for learning. This means that your tasks are what you make them into being and the difficulty depends on your ambitions level.
- An opportunity to put your theoretical skills and knowledge into practice and a chance to showcase your creativity and initiative.
- Monthly team social events organized during your internship

The official language in the company is English, however, the daily internal dialog can be conducted in both Danish and English.

## How to Apply

**In addition to your resume**, we would like you to write a kickass motivational letter stating why you would like to have your internship with Lyras and how your skills and competencies could help us along the way. You may outline any difficulties you think could be a challenge for us now or in the future, and how you think we should approach those challenges. Feel free to include other information that are necessary. Also, include the following details:

- Your university and area of study
- Duration of Internship
- Your expectations during the internship and areas you would like to work on

We look forward to receiving your application!

**If you are interested, please upload your CV and motivational letter under “[Careers](#)” on our website. This is to be handed in no later than **22-May-2020**.**
